Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

This sequence represents a peptide fragment from a novel human type ligand polypeptide corresponding to amino acid residues 34 to 53 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, G protein-coupled receptor; ligand binding; pharmaceutical; modulator; pituitary; central nervous system; pancreas; prophylactic; therapeutic agent. Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland. Fukusumi S; Human type G protein-coupled receptor ligand fragment 4. ď Fujii Habata Y, Kawamata Y, Hosoya M, AAW31394 standard; peptide; 20 AA. brain tumour, emmeniopathy, autoimmune disease, prolattinoma, brain tumour, emmeniopathy, autoimmune disease, prolattinoma, infertility, impotence, amenorthes, galactorrhea, acromegaly, Chiari-Frommel Syndrome, Argonz-del Castilo syndrome, Porbes Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful in diagnosis, as drugs and in studying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand
                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Monoclonal antibody, 19P2 ligand; diagnosis; prolactin secretion; pituitary; regulatory mechanism; central nervous system; pancreatic.

The present sequence represents a human type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing promoting prolactin secretion can be used for treating or preventing hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin

                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion

The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a caactive group (III) etg. succinimidyl and mademido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a competitive set therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth components and neurotransmitters, to protect them from peptidas activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent competides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Companies the action of peptidases to increase length of activity (half contracts the action of peptidases to increase length of activity (half intracellular uptake and interference with physiological processes. AAB30829 to AAB3241 represent public and be used in the companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, corticotrophin releasing hormone, CRH, G protein receptor ligand, analgesic; hyperaldosteronism; hypercortisolaemia; hypoadrenocorticism; Addison's disease, adrenal gland hyperfunction; obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present invention relates to a method of screening for compounds for promoting wakefulness or sleep in a mammal. The method involves administering a prolactin releasing peptide (PrRP) receptor (GPRIO) agonist or antagonist respectively and determining the ability of the compound to promote wakefulness or sleep. The compounds identified from the method are used in the therapy of epilepsy and other diseases associated with absence seizures and in promoting wakefulness and sleep in individuals having sleep disorders such as insomnia and narcolepsy. PrRP receptor agonists may be used to treat common disorders which lead psychogenic hypersomnia. PrRP receptor antagonists are useful for promoting sleep and for treating insomnia such as adjustment sleep disorder and psychologic insomnia. The present sequence is human PrRP-31 C-terminal peptide, PrRP-20
                                                                                  Screening for compounds useful for promoting wakefulness or sleep, and for treating sleeping disorders, e.g. insomnia, hypersomnia or sleep apnea, comprises administering a prolactin releasing peptide agonist or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a method of producing a peptide comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide production by gene recombination associated peptide #30.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide production; low-molecular peptide; KiSS-1; GPR8 ligand; gene recombination.

Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, of sturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia, hypertoholesterolaemia, hyperidideemia, hypertoholesterolaemia, diabetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma,
excision of the N and C-terminals of a target peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptides e.g. KiSS-1 peptide and GRRB ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             G protein-coupled receptor; ligand binding; pharmaceutical; modulator;

        amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, steporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow; caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. wes pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                 .

The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a texaget peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptides e.g. KiSS-1 peptides and GRRB ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                            Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              G protein-coupled receptor; ligand binding; pharmaceutical; modulator;

                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a peptide fragment from a novel human type ligand polypeptide corresponding to amino acid residues 34 to 55 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prohylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, cultrophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, panoreatitis, renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinal pinary, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinal pinary, transient brain ischaemia, epilepsy, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow; caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor Thisand. This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hyperotrisolaemia, secondary or chronic hypoatencocriticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; corticotrophin releasing hormone; CRH; G protein receptor ligand; analgesic; hyperaldosteronism; hypercortisolaemia; hypoadrenocorticism; Addison's disease; adrenal gland hyperfunction; obesity.
                                                                                                                                                                                                               This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. wea pains and atonic bleeding, before and after expulsion of placenta, uterina recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                              drugs
Physiologically-active polypeptide recognized as ligand by G protein-
coupled receptor protein, for promoting secretion of oxytocin, as drugs
for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPR10. May stimulate lactotrophs directly to secrete PRL.

-!- TISSUE SPECIFICITY: Medulla oblongata and hypothalamus.
                                                                               Gaps

-!- FUNCTION: Bidirectionally degrades single-stranded DNA into large acid-insoluble oligonucleotides, which are then degraded further into small acid-soluble oligonucleotides (By similarity).

-!- GATALNITY: Expuncheolytic oleawage in either 5' to 3'-
or 3'- to 5'-direction to yield nucleoside 5'-phosphates.

-!- SUBUNIT: Heterooligomer composed of large and small subunits (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Comparative complete genome sequence analysis of the amino acid replacements responsible for the thermostability of Corynebacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8;

Submitted (MAY-2002) to the EMBL/GenBank/DDB databases.
-!- FUNCTION: Bidirectionally degrades single-stranded DNA into large acid-insoluble oligonucleotides, which are then degraded further into small acid-soluble oligonucleotides (By similarity).
-!- CATALYTIC ACTIVITY: Exomocleotytic cleavage in either 5' to 3'-
Or 3' to 5'-direction to yield nucleoside 5'-phosphates.
-!- SUBUNIT: Heterooligomer composed of large and small subunits (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-OCT-2001 (Rel. 40, Last sequence update)
28-PEB-2003 (Rel. 41, Last annotation update)
Probable exodeoxyribonuclease VII large subunit (EC 3.1.11.6)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacteria, Actinobacteria, Actinobacteridae, Actinomycetales,

J. Bacteriol. 173:1051-1063(1991).
-!- FUNCTION: Involved in UV protection and mutation.
-!- SIMILARITY: Belongs to the DNA polymerase type-Y family.
-!- SIMILARITY: Contains 1 umuC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

-!- CATALTIC ACTIVITY: D-fructose 1,6-bisphosphate = glycerone phosphate + D-glyceraldehyde 3-phosphate.
-!- COFACTOR: Zinc (By similarity).
-!- PATHNAX: Glycolysis; sixth step.
-!- PATHNAX: Glycolysis; sixth step.
-!- SUBUNIT: Homodimer (By similarity).
-!- SUBUNIT: Belongs to class II fructose-bisphosphate aldolase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4 (COVALENT) (BY SIMILARITY).

A novel form of cytochrome P-450 in beagle dogs. P-450-D3 is a low spin form of cytochrome P-450 but with catalytic and structural properties similar to P-450 but with catalytic and structural Biochem. Pharmacol. 38:91-96(1989).
II properties similar to P-450 but with catalytic and structural monoxygenases. In liver microsomes, this enzyme is involved in an monoxygenases. In liver microsomes, this enzyme is involved in an monoxygenases. In liver microsomes, this enzyme is involved in an of structurally unrelated compounds, including steroids, fatty acids, and xenoblotics.

0
-:- SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum.
-:- TISSUE SPECIFICITY: Constitutively expressed in liver.
-:- INDUCTION: By polychlorinated biphenyl (PCB) in liver and kidney.
-:- SIMILARIY: Belongs to the cytochrome P450 family.
PIR: B37222; B37222.
INTERFY: JPR001128; Cytochrome P450.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DOMAIN: The RS2 (Arg/Ser-rich domain 2) and RNP-CS (ribonucleoprocean consensus sequence) domains are required for (ribonucleoprocean consensus sequence) domains are required for both male sterliity and female-specific dax splicing but the RS1 domain is dispensable (By similarity). PTM: Extensively phosphorylated on serine residues in the RS domain (By similarity). SIMILARITY: Contains 1 RNA recognition motif (RRM) domain. SIMILARITY: Belongs to the SR family of splicing factors.
                                                                                                                                                                                                       453 453 IRON (HEME AXIAL LIGAND) (BY SIMILARITY)

Destret D.U., Massive gene decay in the leprosy bacillus.", Nature 409:1007-1011(2001).

-! FUNDTION: Converts 1-hydroxy-2-methyl-2-(E)-butenyl 4-diphosphate into isopentenyl diphosphate (IPP) and dimethylallyl diphosphate (DMAPP) (By similarity).

-!-CAPTALTITC ACTIVITY: Isopentenyl diphosphate + NAD(P)(+) + H(2)O = (E)-4-hydroxy-3-methylbut-2-en-1-yl diphosphate + NAD(P)H.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=21128732; PubMed=11234002;
